

10:45 → Rebuilding Org Chart

(- Wave Up → Matthias)

- Bsport → Zaharia → Hospitality (?)

- Capgemini → Magorizata

- Softonic → Fiona (29 y → Free software download)

- Accenture → Anita

→ Stopped roles now we have AI

1) junior programme/developer; coding / softonic

dev people within, get people of next level
15% promoted & new org structure

2) Tialo → AI as a tool to work differently
recruiting but tialo

3) chief of staff position hiring stopped + business
analysts + juniors

4) Diffrence & change to labor market
↳ subject matter experts still required
(Accenture)

Operators = no juniors ; consultancies = hire based on
customer needs

- Efficiency > junior dev. ... // Hunting for more seniors from
"bigger fish"
- Engineers, senior coders
- Google & Meta layoffs → obtain those
talents

Who will pay for education of future talent?

- Dev of talent
- softonic - AI first
- Now more about people, hire curious people that challenge and question
- Focus on intuition & personal fit (connection of people)
- Allow space to practice and fail

Where shall talent come from? - unclear

Skill set

- Def. of talent still unclear as technology is evolving!

- Responsibility
- curiosity → Emotional intelligence - open minded people!
- Power of intuition; not just data

Jobs created & lost from AI

90.000 jobs lost → 170.000 jobs to be created

What are those?

- Accenture - Title might remain but role will transform & adapt
- Capgemini - Role will transform & where upskilling is needed
use & understand AI benefits!
curiosity as key
Each & everyone to find their spot

Repetitive tasks & processes
being taken over by AI.

What will be the new jobs?

- No hiring
waves

- Layoff wave
though!

where are new
jobs?

Trends:-

- Career change : Not manager but side department,
// new paths, growing new teams!

Unclear where to put them but get
new roles!

New career path!

2021/22 - Tech overhired & that's layoff
reason

↳ No AI layoff!

- old tech company be smart
where to put money as customer
invest in AI first

↳ 10.000 per person / month AI
in Asia, no cut off / layoff

→ Cut because of AI still there

- Losing culture (3-5 y to build
culture)

- Avoid environment of fear

- Keep values & avoid tech. to
rule

Shareholder value requires cost reduction

↳ Reach goals w/ people behind it

↳ At first ⇒ Change way of thinking (culture)

- People, use freed up time to innovate
- Bring people along

- Speed of change can be dangerous

↳ Trafo : optimization & cost cutting

→ Loads of investment in personal upskilling

→ rethink processes & roles as well (operations)

Forgot on how will we use it?
What will be the benefit?

High invest vs. low adoption!
Risk of lacking effectiveness

What's difference of AI natives & AI expert :

- When people use AI daily they become expert? ↯

• Tech expertise needed

• 'Avoid slapping AI on every process.'

• AI is just a tool

• Trafo not just technological but mentally! Guide change!

- Invest education of people but lacking trafo / change expertise

- Mindset of learning, also of top mgmt

- Frustration of re-doing; cost if it is done properly

- AI will be there all easy

↳ Data issues, process not fitting & it will take time

E.g. Performance review w/ AI

- Results are worse, lacking progression!
- If we loose human connection we will lose!

↳ objective / goal needs to be clear

Automation of performance reviews = Losing goal of reviews!

1

What is it we try to achieve? Is AI really useful?

Which processes to keep in peoples hands?

-
- Give time to people to experiment!
 - AI is a tool, be conscious about structure to deal with speed of AI
 - Ensure growth & learning mindset
 - Amount of creativity is around!
