

## Demo: Newo.ai

- 95% AI pilots fail / do not create P&L
  - ↳ AI projects are not sticky!
- AI can't replace ~~but~~ it's more filling gaps / people are shifting
- why they are not successful?

1) No baseline to compare it to

2) Pilots are part of innovation dep. but are disconnected from operations

3) AI do less but better! - Avoid progressing agents by piling up tasks on them

- AI employer  $\Rightarrow$  Go beyond pilot

$\rightarrow$  Give it a clear task // a clear job

$\rightarrow$  Orchestration layer to give guardrails

$\rightarrow$  write the job description!

- AI agent to AI employee  $\Rightarrow$  guardrails needed
- Avoid general purpose agents but give it a small, specific task first

Products Agent to build other agents

- Subscription based model

What will Agent bring internally? P&L, better customer care?

- Avoid too ambitious pilots as they might fail!

- Be clear on requirements, start small! ⚠

Do not eliminate people but eliminate what they hate! Ensure the gaps are filled!
