

10:00 | AI to keep EU safe

- Airbus Defense and Space
- Fast data processing, legacy reduction
- Predictive maintenance
- Cyber defense agents
- Present with pitch / option to decision maker
- Agentic vs. sovereign AI?

10:20 | From 0 to corporate hero

- Model given: we can adapt context, memory & tool!
- Context = Instructions!
- Agent to reflect on own memory → Agents to share insights between one another

Corporate Hero:

- One Agent
 - Learns over time
- } Instant operating system

Grok Bot

- Space X AI
- AI Teammates

} Agent Network = Agent choreography

- Agent to Agent com (AZA)

⇒ Agents decide when which agent needs to jump in

A COMPANY IS NOT ONE JOB

THE PATTERN

ONE BOT. ONE JOB.

MEETING RECAP

Conversations → decisions

TASKS

Decisions → owners

DAILY AGENDA

Owned work → priorities

A second responsibility needs a second owner — not a bigger prompt.

A GLIMPSE INTO THE FUTURE TODAY ...AND IT LOOKS AWESOME

- System 1 / System 2 (Jev)
- Memory management
- A2A communication
- Agent Choreography

AGENT NETWORKS

11:00 - AI in sales

- Holded

↳ Human led sales calls // Sales reps

15€ tickets per month → up to higher tickets = Dif. service offerings

- Fin AI

↳ capture & qualify demands from website

↳ qualification funnel

⇒ AI needs a stricter playbook than a human rep.

- Supersonik

↳ Handle prospects e.g. freelancer → AI led demo After hour calls

↳ verify, fuel it to avoid hallucination

- Claude cowork

↳ Track competitor movement → Assessment → Battlecard

↳ Ensure adoption, judgement & habit take longer

↳ Structure & control over what is being build

↳ Review to avoid hallucination

- What is next?

↳ Live assist for sales rep.

↳ Play book outofill (in CRM) ⇒ workflows are airtight + no delay

11:20 Agentic AI in 2026 as trend // Human in the loop

Hype, Reality & Road Ahead

AI as major trends = from 2010

Gen AI Impact → - Performance improve
- Job shift by 2030
↳ new roles emerging

AI Agents → - LLM becomes relevant in day to day operation
- Human needs to stay in the loop

→ Build Agents + specific tasked agents
& not just use general LLMs anymore!

Gen AI 2022 → Agentic AI → 15-20y
GPU Physical AI
Agents

Learning: → AI adoption „fails“

88% using it but only 7% scaled it
→ ROI due to AI shall be the target

11:40 - Private AI Exchange // Digital Reality

- AI Infrastructure +

key questions

- High density readiness + Energy

⇒ Hybrid model
Design public vs private

- Data sovereignty
operation

⇒ "

- Legal sovereignty

⇒ contract

- Connectivity ⇒ How is data routed? ⇒

- Scalability

- Security & Resilience

- Sustainability (energy, water etc.)

- Cost optimization

⇒ Tokenomics
cost calculation of
running AI

12:00 Scaling AI

- compound knowledge & scale

- generate real business impact (ROI) ⇒ Mck study

- Top down - costly

Bottom up - delusion of outcome

validation proofs to be an issue!

Issues:

Adoption but all over the place {
- High deviation in usage
- costs
- productivity increase not measurable!

Standardization + context layer!

↳ correct permissions } systematize knowledge!
↳ 1 gateway to connect } Automated structuring of know how!

Echo monitoring
solution

AI route chooses „cheapest“ + „best fitting“ route!
